00	1.6%	2.6%	3.6%	4.6%	8.0%

If you use TE in your league just use the WR Charts but subtract -1 from the TE rating. That means all 5 rated TE would roll off the 4 charts. Roll off the 1 rated charts for all TE that have a 1 or 2 rating. These are pretty basic but I am going to go over each one. In my examples I will use a 5 rated QB, HB, and WR.

These charts are designed to calculate stats either by season or by individual games. Anytime you get a 0 in attempts or receptions and you are multiplying by games played to get season stats, treat that 0 as a 1. As no player can get shutout over the course of an entire season. Lets begin with my 5 rated Qb. I am going to base my stats on a 16 game season. So I will be multiplying By 16 games whenever applicable. My 5 rated Qb is up first. I rolled a 30 for attempts. He has thrown 20 attempts, but I am playing a 16 game season so I multiply 20 X 16 to get a 320 passing attempts for the season. Now I go with completion % and actual number of completions. Roll the dice and I get a 93. He has completed 73% of his passes for this season. 73% X 320 = 233.6 round up to 234. So my QB so far has Gone 234-320 73%. Now lets get to passing yards. Roll the dice and I get a 72. I get 11.7. It tells me to multiply this by completions. So, 234 X 11.7 = 2737.8 round up To 2738. So my Qb so far is 234-320 73% 2738. Now lets do TD passes. I rolled a 39. I got 13% and am instructed to multiply it by my completions. So 234 X 13% = 30.4 Round down to 30. So my QB is now 234-320 73% 2738 30TDs. Now on to INTs. Roll the dice, and I get a 97. That is 1%. I am instructed to multiply by attempts. 320 X 1% = 3.2 or round down to 3. So the final stats on my 5 rated QB is: 234-320 73% 2738 30TDs 3INTs. What a great season. Now lets look at a 5 rated HB. First is rushing attempts. I rolled an 86 and got 27. Since I am playing 16 games I multiply 27 X 16 = 432 carries. Now onto rushing average and yards. I rolled a 43 and got 4.3 yards per carry. Multiple 432 X 4.3 and I got 1857.6 round up to 1858. So far my HB Has 432-1858 4.3. Now lets do his Tds. I rolled an 11. 2.6% and I am instructed to multiply that by his attempts. 432 X 2.6% = 11.2 round down to 11. So my Hbs final season stats are 432-1858 4.3 11TDs. A great season. Now lets do my 5 rated WR. First we roll for receptions. I rolled an 8. Only 4. Multiply 16 X 4 = 64 receptions for the season. Now onto average and yards. I rolled a 19. That is 13.5. Multiply 13.5 X 64 = 864 yards. My receiver has 64-864 so far. No onto Tds. I rolled a 61 giving me 19%. Multiply 64 X 19% = 12.1 round down to 12. So my 5 rated receiver finished the season with 64-864 12TDs. Not a great year but decent.

Anytime you roll on a chart and you see a value with a + after it. Roll 1 10 sided die and add that number to the number before the + to get your total amount. If you are calculating your numbers for a full season and not by the game, then ignore the + and just use the number value.
