

STOLEN BASE CHARTS

Obtain a random number and refer to the chart, using the SP rating of the man or men involved. If the chart indicates the player does not steal, he simply holds base. On double steal, defense indicates which runner it will try for. On an error on double steal, second runner advances the same number as the first.

RUNNERS ADVANCING ON BASE HITS

Runners advance one base for a single (two bases if off a pitcher's card), two bases for a double and three bases for a triple. However, the offense has the option of trying to advance runners extra bases on the hits, such as two bases on a single and three on a double. If such an attempt is to be made, use the proper chart and refer to both the OBR of the lead runner and the throw rating of the outfielder involved in the play.

SECONDARY ADVANCE: When a play is made on a runner who is advancing to either home from second on third from first on singles, the batter automatically takes second base if his OBR is A or B.

If a play is made, the relay throw is made by:

- 3B to C on double to left
- SS to C on double to center
- 2B to C on double to right

WHEN TWO MEN ARE OUT: Add 20 to all safe chances as runners are away quickly.

HIT AND RUN CHART

This chart is to be used when the Hit and Run play is called for and can only be used when there is a man on first, or men on first and second. When in effect, do not go through PB selection, but obtain random number and read result directly from the chart using proper rating for H&R (HR) found on the batter card. No usable with runner on third.

#Against a pitcher whose PB is 2-7 or better, play is a ground out (2B-1B) and all runners advance.

*No optional advance allowed.

DEFENSIVE OPTION PLAY CHART

Offense decides whether to send runner on third home. Then DEFENSE has option of either making play at home or allowing runner on third to score, retiring the batter at first. If RUNNER COMING HOME and defense TRYING FOR runner at home:

OBR refers to runner on third. Batter safe on fielder's choice when play made at home.

PITCHING ADJUSTMENT CHART

The Pitching Adjustment Chart comes into play only in the SEVENTH INNING and only when a pitcher is working on a SHUTOUT. For example, if a pitcher has allowed one run or more (earned or unearned) through six innings, he is not eligible to use the chart. However, if a pitcher has not allowed a run through six innings, he is eligible to use the chart. In using the chart, certain FAC numbers (off either pitcher or batter's card) may be changed from HITS to OUTS. After obtaining a random FAC number, check the chart under the proper inning to see if the hit is converted to an out. ALL OUTS ARE POP OUTS AND RUNNERS HOLD.

Example: Pitcher has a shutout in the eighth and the batter has a result on his card and random number 17 appears. Instead of the result being a hit, the PITCHING ADJUSTMENT CHART changes the result to an out.

WHEN A RUN IS ALLOWED BY A PITCHER USING THE PITCHER ADJUSTMENT CHART, HE NO LONGER IS ELIGIBLE AND PLAY RETURNS TO NORMAL PROCEDURE.

ADVANCING ON FLY BALL OPTION

The OUT CHARTS call for the automatic advance on fly outs, but often you may wish to try and advance a runner. If so, use the table below. When a play is made on the advance attempt, all other runners advance.

OBR E cannot try advance. If fly out is deep, add 20 to safe chances. This chart is OPTIONAL.
